+-----+  
| Introduction - ODYSSEUS/EduCOSMOS |  
+-----+

ODYSSEUS/EduCOSMOS is a project for educational purposes to implement a part of the storage system of ODYSSEUS(\*) named ODYSSEUS/COSMOS. It consists of the following three projects:

- EduBfM project : We implement the operations of the buffer manager consisting of only a very limited subset of the ODYSSEUS Buffer Manager (BfM) functionality.
- EduOM project : We implement the operations of page-related structures consisting of only a very limited subset of the ODYSSEUS Object Manager (OM) functionality.
- EduBtM project : We implement the operations of the B+tree index manager consisting of only a very limited subset of the ODYSSEUS B+tree Manager (BtM) functionality.

To help implement each module, students are provided with the project manual, which contains the base information of the project, the procedure to follow, and the header/object files containing data structures and useful APIs.

Students are also provided with the test module to test the functions that they implement and the executable solution file showing the correct test result.

Students can learn about the structures and functionality of major modules of a DBMS through each project manual provided and can learn the DBMS system programming skill by implementing and testing these modules.

-----  
(\*)ODYSSEUS

ODYSSEUS is an object-relational DBMS developed by Kyu-Young Whang et al. at Advanced Information Technology Research Center (AITrc) / Computer Science Department of KAIST. ODYSSEUS has been being developed since 1990. Some useful references are as listed below.

```
+-----+
| Compilation and Execution |
+-----+
```

ODYSSEUS/EduCOSMOS is to be compiled and run on Linux (Red Hat).

The recommended environment for compiling and running ODYSSEUS/EduCOSMOS is as follows:

- Platform
  - 32bit: Linux version 2.6.18-308.el5PAE
  - 64bit: Linux version 2.6.32-431.el6.x86\_64
- Compiler
  - 32bit: gcc version 4.1.2
  - 64bit: gcc version 4.4.7
